

Interesting Examples of Continuous Frequency Distribution for Arithmetic Mean

Example 1: Students' Marks

Class Interval	Frequency
0-10	4
10-20	8
20-30	12
30-40	10
40-50	6

Question: Calculate the Arithmetic Mean using the Direct Method.

Example 2: Monthly Income (₹000)

Class Interval	Frequency
10-20	5
20-30	9
30-40	15
40-50	8
50-60	3

Question: Calculate the Arithmetic Mean using the Direct Method.

Example 3: Delivery Time (min)

Class Interval	Frequency
10-20	6
20-30	12
30-40	16
40-50	9
50-60	2

Question: Calculate the Arithmetic Mean using the Direct Method.

Example 4: Employee Ages

Class Interval	Frequency
20-25	7
25-30	14
30-35	18
35-40	9
40-45	2

Question: Calculate the Arithmetic Mean using the Direct Method.

Example 5: Daily Steps

Class Interval	Frequency
2000-4000	5
4000-6000	10
6000-8000	15
8000-10000	12
10000-12000	8

Question: Calculate the Arithmetic Mean using the Direct Method.

Example 6: Plant Heights (cm)

Class Interval	Frequency
50-60	4
60-70	9
70-80	14
80-90	11
90-100	5

Question: Calculate the Arithmetic Mean using the Direct Method.

Example 7: Electricity Bills (■)

Class Interval	Frequency
1000-1500	5
1500-2000	11
2000-2500	13
2500-3000	8
3000-3500	3

Question: Calculate the Arithmetic Mean using the Direct Method.

Example 8: Commute Time (min)

Class Interval	Frequency
0-15	8
15-30	16
30-45	12
45-60	7
60-75	2

Question: Calculate the Arithmetic Mean using the Direct Method.

Example 9: Package Weight (kg)

Class Interval	Frequency
1-2	3
2-3	9
3-4	15
4-5	10
5-6	3

Question: Calculate the Arithmetic Mean using the Direct Method.

Example 10: Internet Usage (GB)

Class Interval	Frequency
0-5	6
5-10	12
10-15	14
15-20	9
20-25	4

Question: Calculate the Arithmetic Mean using the Direct Method.
